

Computer Forensics Recovering Evidence in Non- Compete Cases

Leaving with more than just a severance package....

- Downloading/Exporting clients lists from CRM
- Stealing trade secrets
- Copying proprietary software code
- Downloading/Exporting Pricelists
- Collaborating with competitors
- Copying proprietary information

Computer Forensics

You suspect a sales person has downloaded customer files prior to departing the company. What can you do?

Have a licensed computer forensics examiner complete a byte-by-byte image the networks, hard drives and back up drives of the device in question.

- Find encrypted or hidden files
- Deciphering and breaking codes and password
- Recovering deleted files
- Extracting metadata that identifies who created the file, modified dates, sent dates

Analyzing the Data

Computer forensics experts analyze the data and determine which parts of the information can be used in your case

The relevant data is uploaded into the analytics program, an in depth forensically sound tool that allows all parties involved to use the same recovered data for analysis

Surveillance and Presenting Evidence

- Surveillance of former employee
- Interviews
 - Clients
 - Employees
 - Third Parties
- Evidence Gathering
- Comprehensive Reporting
 - Computer Forensics findings
 - Surveillance Details
 - Interview Results

Because all evidence was gathered by licensed professionals outside of your company, all evidence will be considered uncontaminated and valid in a court of law
